

CSE UBUNTU VIRTUAL MACHINE

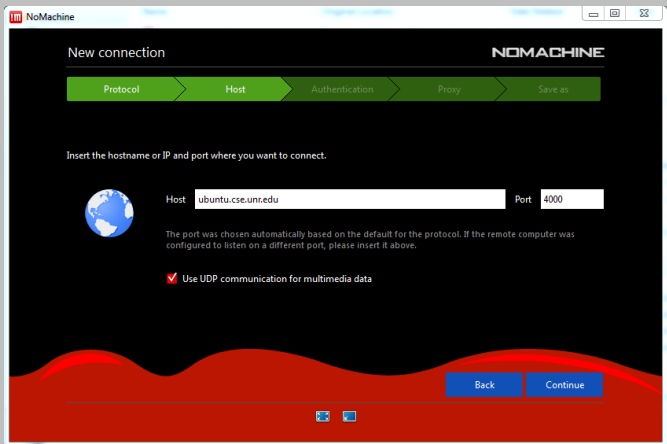

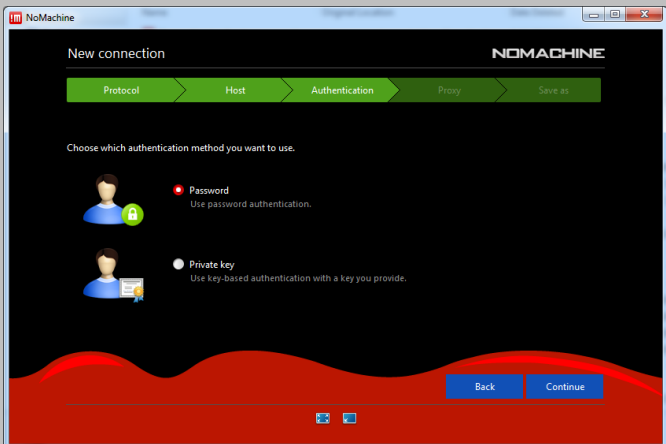

1. Open the **NoMachine Enterprise Client** (download free from <http://bit.ly/1fal6ac> at home) and **Create a new custom connection**.

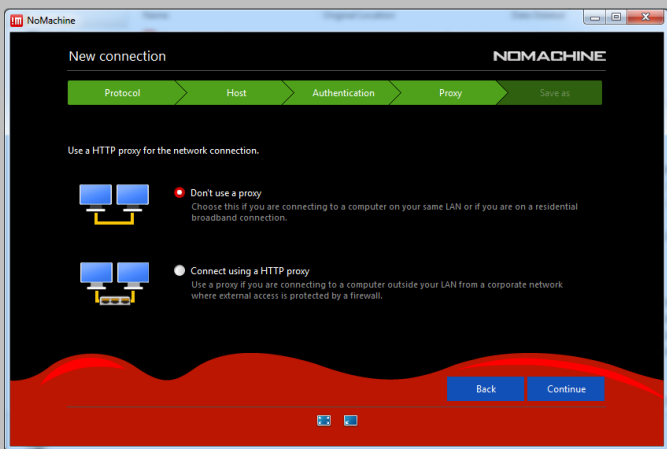

2. Select **NX** as protocol and continue.

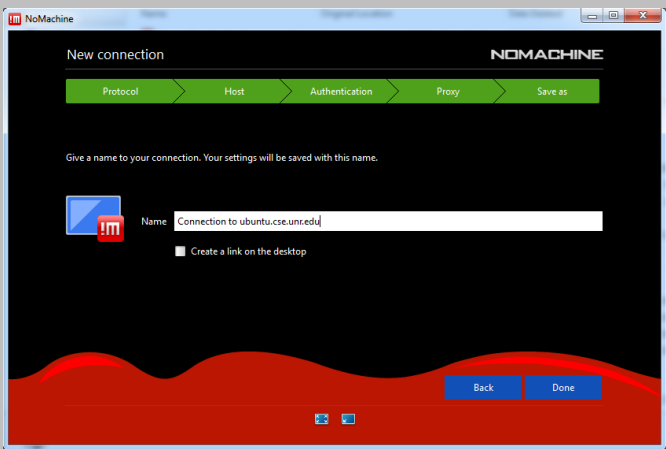

3. Type **ubuntu.cse.unr.edu** as the host and **4000** as the port. Check the box and continue.

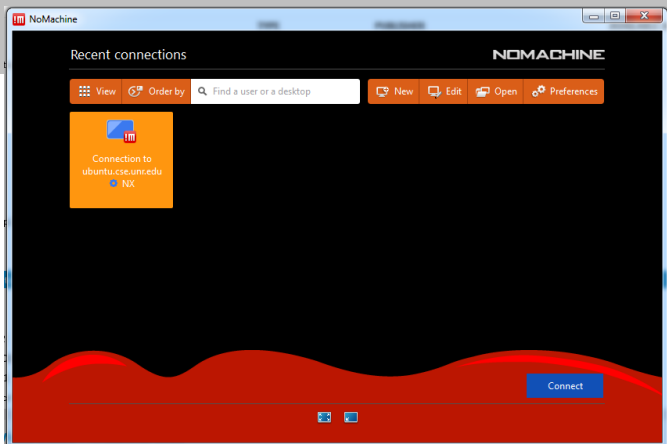

4. Select **Use password authentication** and continue.

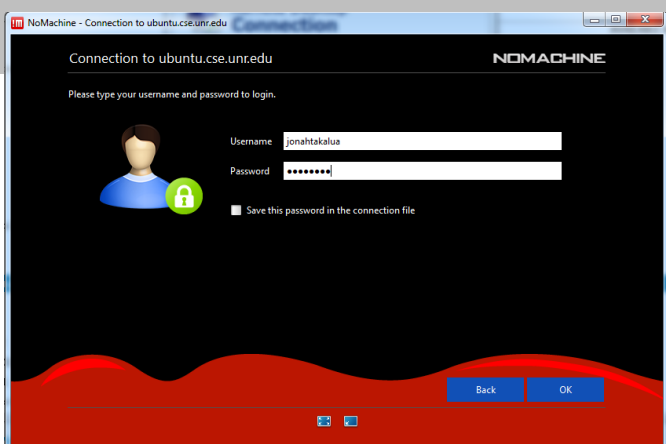

5. Select **Don't use a proxy** and continue.

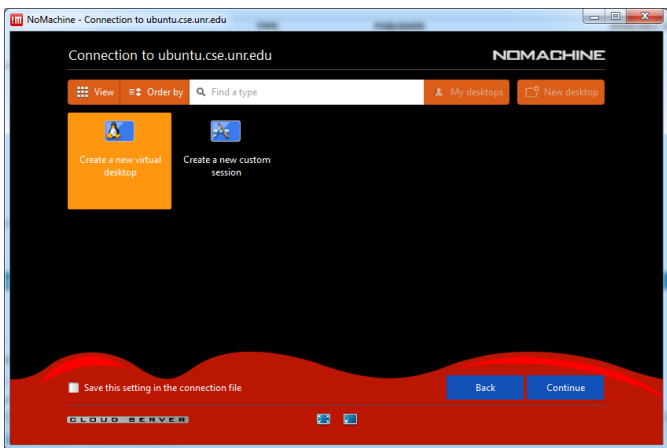

6. Leave the default name or change it and continue.

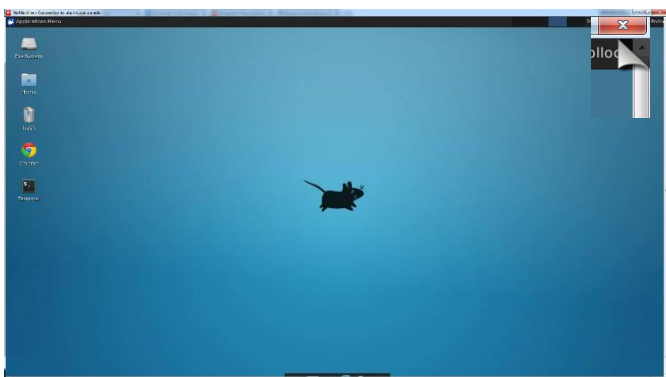

7. Connect to **ubuntu.cse.unr.edu**.

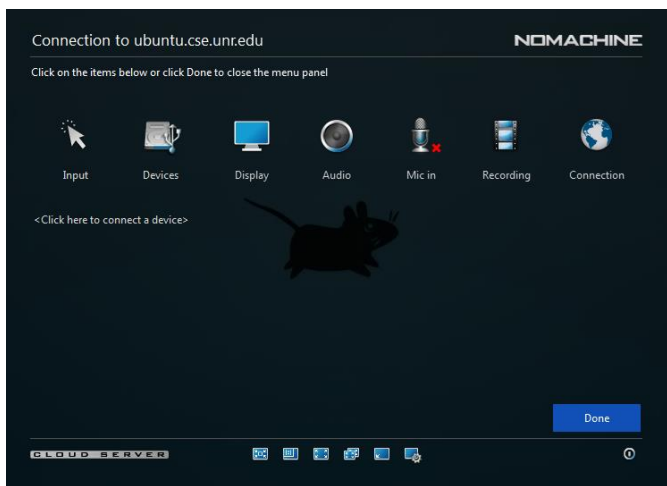

8. Enter your **NetID** and password and continue.

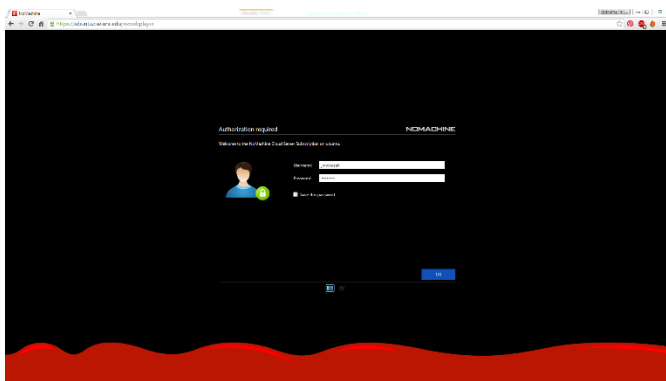

9. Click **Create a new virtual desktop** and continue.

10. This is the desktop. To change virtual machine settings, hover pointer in the top right corner or press **Ctrl+Alt+O**.

11. From the virtual machine settings menu, you can adjust display settings, connect devices, and more.

The virtual machine can also be accessed from a web browser, without the need for the NoMachine client. (The client provides better performance than a browser, so use it when available.)

To connect in a browser, go to **ubuntu.cse.unr.edu** and enter your NetID and password. Clear your **cookies** and **cache** if you have issues, or use an Incognito window in Chrome.

Thank you for your patience as we transition to this new system.
Please email ehelp@cse.unr.edu with any questions or complications.
